AUTHOR	Kilpatrick, Jeremy; Wagner, Sigrid
TITLE	Bibliography on Mathematical Abilities.
INSTITUTION	Georgia Univ., Athens.
SPONS AGENCY	National Science Foundation, Washington, D.C.
REPORT NO	UPD-9551/8-83
PUB DATE	Aug 83
GRANT	SED-77-17946
NOTE	284p.; Prepared by the Mathematical Abilities Project.
AVAILABLE FROM	Mathematical Abilities Project, 105 Aderhold Hall, University of Georgia, Athens, GA 30602.
PUB TYPE	Reference Materials - Bibliographies (131)
EDRS PRICE	MF01 Plus Postage. PC Not Available from EDRS.
DESCRIPTORS	*Ability; *Cognitive Processes; Educational Research; Mathematics Achievement; *Mathematics Education; Psychological Studies; *Research Tools
IDENTIFIERS	*Mathematical Ability; *Mathematics Education Research

ABSTRACT

The items in this bibliography were collected as part of a project, "An Analysis of Research on Mathematical Abilities," conducted at the University of Georgia. The 1,491 entries in the bibliography are listed alphabetically by author. Each entry is preceded by a line containing a name and date code (used in computerized alphabetizing of the entries) and a subject code of separate letters. At the end of the bibliography is an index organized into categories corresponding to each of the subject codes. The 18 categories are: theoretical analysis, methodology; definitions of ability; information processing; reviews; clinical or case studies; intervention studies; factor analysis, regression analysis; spatial abilities; memory; creativity, affective variables; gifted; pathology; sex differences; reasoning abilities; instruments; background and review material; history and philosophy of mathematics; and unclassified. PREFACE

The items in this bibliography were collected as part of a project "An Analysis of Research on Mathematical Abilities" conducted at the University of Georgia. The project summarized and evaluated the research literature on mathematical abilities using the resources of the libraries at the University of Georgia (including the E. G. Begle Collection of Research Literature in Mathematics Education) and at the Institut fuer Didaktik der Mathematik, Bielefeld, Germany. For further information about any item in the bibliography, the reader is invited to write to the Mathematical Abilities Project at the address on the cover page.

This material is based upon work supported by the National Science Foundation under Grant No. SED 77-17946. Any opinions, findings, and conclusions or recommendations expressed in this publication are those of the authors and do not necessarily reflect the views of the National Science Foundation.

We thank Lynda McKee, Sarah Mason, and Linda DeGuire for their assistance in preparing the references. We are also grateful to Pat Thompson for writing the computer program to catalog the references and to Jimmy Woods and Rosemary Jordan for help in preparing the printed copy.

HOW TO USE THE BIBLIOGRAPHY

The 1491 entries in the bibliography are formatted and ordered according to the style specified in the *Publication Manual of the American Psychological Association* (1200 Seventeenth Street, NW, Washington, DC 20036; 2nd ed., 1974). A sample entry is the following:

CARROLL JBMAXWELL 79 A T D I R F S M K X Q N

Carroll, J. B., & Maxwell, S. E. Individual differences in cognitive abilities. *Annual Review of Psychology*, 1979, *30*, 603-640.

Each entry is preceded by a line containing a name and date code (used in alphabetizing the entries) and a subject code of separate letters. The letters have the following meanings:

A	*mathematical abilities, achievement in mathematics*: Most items have this code; it means that the item makes reference to ability or achievement in mathematics.
T	*theoretical analysis, methodology*: The item makes reference to theory or research methodology.
D	*definitions of ability*: The item contains a definition of ability.
I	*information processing*: Concepts from information processing are referred to in the item.

R	reviews: All or a major part of the item is a review of the literature.
C	clinical or case studies: Either the item reports a clinical or case study, or it discusses the methodology.
V	intervention studies: The item reports a study designed to improve mathematical abilities or achievement.
F	factor analysis, regression analysis: The item refers to techniques that come under the general heading of factor analysis.
S	spatial abilities: The item makes reference to spatial abilities.
M	memory: The item makes reference to memory.
K	creativity, affective variables: The item refers either to creativity or to personality variables having to do with attitude, cognitive style, etc.
G	gifted: The item is concerned with children or adults who are gifted or talented in some way.
P	pathology: The item is concerned with defects in intellectual functioning that might be related to mathematical abilities.
X	sex differences: The item makes reference to differences between the sexes in behavior that might be related to mathematical abilities.
Q	reasoning abilities: The item makes reference to reasoning abilities.
N	instruments: One or more instruments that might be used to assess mathematical abilities are presented in the item.
B	background and review material: The item contains useful background material that does not directly concern research on mathematical abilities.

H history and philosophy of mathematics: The item pertains to either the history or the philosophy of mathematics.

At the end of the bibliography is an index organized into categories corresponding to each of the above topics (except the first, which is too large to be useful). Under each topic are listed, in alphabetical order, the code lines of the items pertaining to that topic. The reader who wishes to locate references on a combination of topics should look in the index under the topic that seems to have the fewest reference items and then, by scanning the letter codes, pick out the items with the appropriate combination of code letters. A miscellaneous category at the end of the index contains five items not available for coding.

Most items were coded by scanning a copy of the book or article, although in some cases--especially dissertations--an abstract had to be used. The reader is cautioned that the coding of items was not done according to strict rules. Where there was a question about the appropriateness of the item for a topic category, the tendency was to be generous in the interpretation. Therefore, some topic categories may contain items that seem to have little to do with the topic. Further, because the Mathematical Abilities Project made a special effort to obtain difficult-to-locate references, there was a tendency to omit some standard references in the field in favor of a fuller coverage of lesser known work. The knowledgeable researcher may be surprised at some of the omissions but presumably will be heartened by the identification of relevant nonstandard titles.

TABLE OF CONTENTS

Preface iii

How to Use the Bibliography v

Bibliography 1

Index

Theoretical Analysis, Methodology 187
Definitions of Ability 197
Information Processing 200
Reviews 205
Clinical or Case Studies 211
Intervention Studies 214
Factor Analysis, Regression Analysis 219
Spatial Abilities 227
Memory 235
Creativity, Affective Variables 242
Gifted 250
Pathology 252
Sex Differences 254
Reasoning Abilities 260
Instruments 269
Background and Review Material 274
History and Philosophy of Mathematics 276
Unclassified 277
